

Dear Sir or Madam,

We address you with a partnership offer in an implementation of the unique invention:

21st century playground – a project ahead of its time

From media:

“As a former director of a prison for juveniles, on the basis of a longtime experience in treaty of juvenile delinquents, I highly appreciate the idea of interactive parks, especially the interactive playground, for a healthy development of children and adolescents.”

Therefore I support the realisation of that project as soon as possible also in Germany .

Ass. jur. Hans-Uwe Worliczka, Ltd.Regierungsdirektor a D., Munchen.

What?

The interactive playground connects computers with a movement in the fresh air and may serve as a supplement to a school tuition.

The computer playground is an innovative system for knowledge and physical development of children, juvenile and adults too.

The game begins at a PC panel. Each participant gets a chip, attached to his/her arm, which distinguishes him/her, according to the age, from other participants.

The participant then selects a range of questions on the computer. After answering the questions, the participant is asked to overcome obstacles on the playground. There are jungle gyms, ladders and artificial rocks in the playground, where he/she always confirms attendance, to make sure the task is fulfilled. The playground communicates with participants via 5D technology. The participants have to use their sight, hearing, as well as touch or olfactory sense to finish their tasks. They gain an invaluable experience.

There is evidence, that people are able to remember only 10% of what they hear and see, but up to 80% of what they do themselves, what they actually experience.

Who?

Invented by Pavel Tuma , Czech designer, the author of Prevention Park theme. This educational project attracted the attention the Ministry of Education of the Czech Republic so much, that it assumed a patronage over the project.

Where?

The park can work anywhere in larger cities in cooperation with schools, local authorities and entrepreneurs, the partners of the project. After this year ´s presentation of the study at Spielwaren messe 2012 we register 25 people from all over the world interested in this project. Applicants from the USA , Switzerland , Italy and Denmark were interested especially in the positive effect of reducing obesity and the investors from Turkey would like to use this project to support their tourism. There are 13 playgrounds to be built in the Czech Republic.

When?

The entire playground can be built up within 4 months.

How much?

The price of one playground (36x18 meter, without an inflatable hall) is around 475, 000 €. The money raised from the entrance fee is etimated return the investments within 8 years. Accompanying activities (café, shop) may even shorten this time (licenses are sold separately). A positive impact on the healthy development of children and their education, gained by a modern, active form is, unlike textbooks memorizing, priceless.
